

The first phase of the playground improvement project will be starting in the week commencing 17th October. In the first phase of the project a 'runway' (zipwire) and climbing stack will be installed in the lower field area adjacent to WAB. The installation project is expected to take four weeks and will involve lorries delivering soil, machinery and play equipment to the site. Our partners in this project, Playsafe playgrounds, have reviewed the issues surrounding access to the site and together we have agreed an approach that we believe will keep disruption to a minimum. The final phase of the project, to replace the play equipment in the current playground, is pencilled in for January.

There is currently a shortfall in the funding for the project and we are seeking donations at <https://gofund.me/6337cfab>.
